About

iAttorney Platform is a shared services platform utilized by a collective group of experienced attorneys dedicated to providing quality legal representation to consumers in a growing array of practice areas.

Legal representation, now more than ever, is an essential tool that is out of reach for many consumers. By sharing technology and automating repetitive functions, attorneys are able to streamline their unique law practices, and thereby drive down costs and pass those cost savings to their clients.

The iAttorney Platform enables attorneys to set competitive price points allowing a broader range of clients to have access to the legal representation they may desperately need, supporting their mission to provide affordable representation to all demographics through innovative strategies.

The attorneys who utilize the platform come from geographically diverse and independent law firms. While the attorneys collaborate to minimize overhead costs, each law firm brings its own independent and unique personality to its clients' matters.

Clients engage with their individual attorneys and law firms; the iAttorney Platform is not designed to create a consortium of law firms who participate in the engagement of each individual client.
